Subject: Colony Meet

Just wanted to let everyone know that if you happened to notice your child's times were faster this evening, there's a good reason for that. The Colony pool is neither a Meter nor a Yard pool, but somewhere in-between. That means that the time your child swam this evening will be converted to another time using the .07 conversion factor. I will post the converted times on the website and at the pool so what is posted will be correct. The times are generally 2-8 seconds slower depending on the event and length..

If you know your child's time, simply multiply it by .07 and then add the result to the time. That will be the official time and what will be posted.
